

OpenGov ERP Integrations™

Connect your data to the OpenGov Cloud™

With OpenGov ERP Integrations™, it's easier than ever to synchronize your data with the OpenGov Smart Government Platform™

Accelerate Government Performance

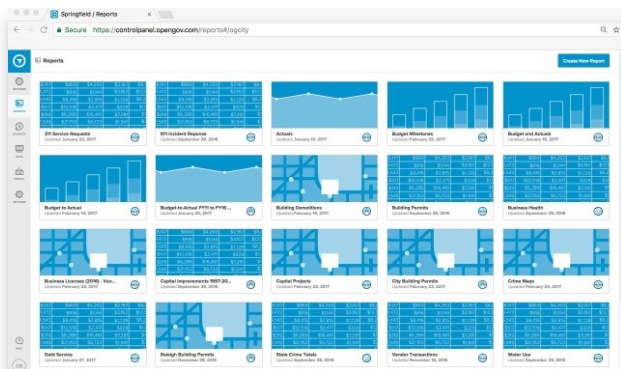

OpenGov is the leader in government performance solutions, with easy-to-use cloud software for better budgeting, powerful operational intelligence, and improved transparency. Decision-makers at over 1,500 governments across the country leverage the OpenGov Smart Government Platform™ to conduct financial analysis, evaluate policy and program effectiveness, collaborate on their budget, and engage their constituents.

Now, with OpenGov ERP Integrations™, we offer an efficient, reliable, and automated solution for connecting your ERP to the OpenGov Cloud™.

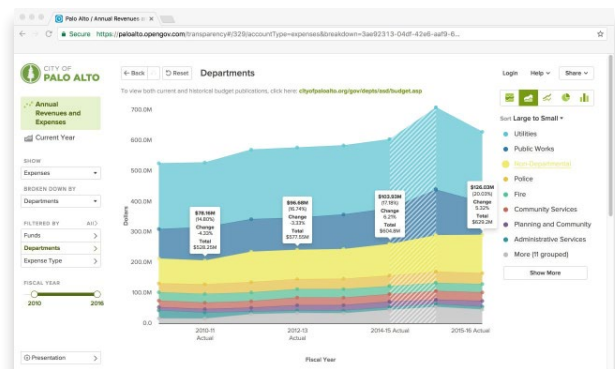

Make The Most of Your Data

Establishing a direct connection enhances the value of your OpenGov investment in three important ways:

- **Saves Time:** Automating data transfers eliminates the need for manual uploads, while our modern and efficient integration technology also reduces the time it takes to transfer data. Data connectors shorten deployment times and maximize time-to-value.
- **Improves Data Quality and Upload Performance:** Direct integration keeps data synchronized and conflict-free, while improving speed and scalability.
- **Accelerates Decision Making:** Facilitate greater collaboration by ensuring everyone on your team is working with the same current, updated information.

Keep all your reports up-to-date.

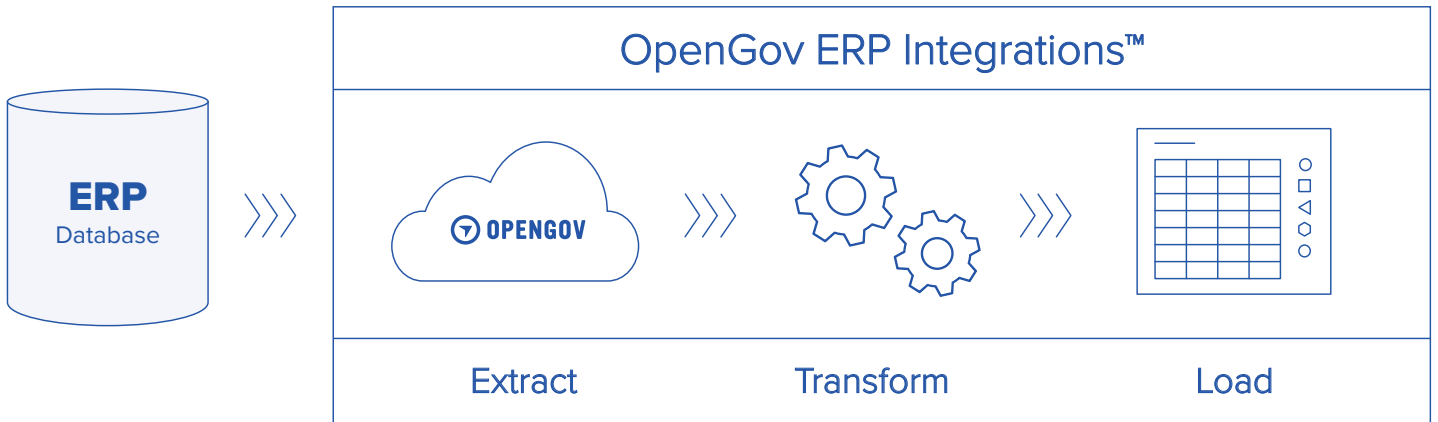

Perform analysis with the latest data.

A Powerful and Flexible Solution

Extract, Transform, Load

OpenGov ERP Integrations™ utilizes Extract, Transform and Load (“ETL”) technology that simplifies and streamlines the process of synchronizing data between your ERP system and OpenGov. Once configured, data uploads can be scheduled according to the frequency needed by your organization. Many customers have opted for daily updates.

Flexible Architecture To Meet Your Organization’s Needs

OpenGov customers have manually loaded data from over 75 different ERPs, and we are building integration connectors for the leading systems used by governments across the country. To provide maximum flexibility, OpenGov ERP Integrations™ supports both direct and indirect connections:

Direct

The preferred method of integration is to establish a direct connection to the underlying ERP database. For many of the leading ERPs, we have developed database schema maps to allow for easy deployment and fast time-to-value.

Indirect

For customers that cannot provide direct access to their ERP’s database, we can establish an FTP connection to the exported data and facilitate data transfers to OpenGov.

Secure Transfers for Peace of Mind

Security encompasses all aspects of OpenGov ERP Integrations™. The user interface, agents, and applications communicate with the cloud through secure channels. Connectors that address authentication, discovery of metadata, query formation, and target operations use secure protocols to communicate with OpenGov applications. Credentials are stored in encrypted containers, and IP safe lists restrict access to specific tenants.
